

Basic to Superlative at Plastindia 2018

Since the turn of the new millennium, Mumbai-based SP Ultraflex Systems Private Limited has dedicated its facilities for the manufacture of converting slitters for the flexible packaging industry. A focused approach has seen SP play a pivotal role in the evolution of these machines right from the days of removable rewind shafts in the nineties to cantilevered, quick lock shafts and then to full differential shafts. In the year 2014, evolution gave way to revolution with the launch of the ROBOSLIT® dual turret series of slitter rewinders. Dual turret technology has had by far the biggest impact on productivity in the history of converting slitter rewinders. The brand name ROBOSLIT® has become synonymous with dual turret technology in the sub-continent, with 18 machines installed since the launch of this series.

user friendliness; and the superlative ROBOSLIT® Plus, which represents the next generation of dual turret machines.

The PRIMASLIT® FL is built around a common frame which accommodates the unwind and duplex rewind sections on the same (front) side of the machine. Apart from making this configuration the most compact amongst converting slitters, such a layout allows free access to the cutting section, reduces the need for operator movement and allows simultaneous supervision of the unwind and rewind process. Truly an operator's delight.

In the space between the PRIMASLIT® FL and the ROBOSLIT® Plus, SP has standardised a host of duplex and dual turret variants with different layouts, reel handling capacities, speeds,

Apart from establishing SP Ultraflex as trend setter and pioneer, the rich industry experience has also enabled SP to address diverse customer challenges through a wide range of well differentiated models. The range today comprises as many as seven models, each having their origin in customisation efforts before going on to become part of the regular manufacturing programme, delivering validated designs and assured performance to its customers.

During Plastindia 2018, scheduled from 7th February to 12th February 2018 at Gandhinagar, Gujarat, the theme at SP will be "Basic to Superlative". During the show, SP will showcase two of their models at extreme ends of the spectrum - The basic PRIMASLIT® FL which is acclaimed for its compact size and

automation levels and material handling options, affording the luxury to optimise model selection basis the application of the customer.

The introduction of the ROBOSLIT® series opened a new chapter, enabling customers to experience a phenomenal increase in productivity over duplex slitter rewinders. The ROBOSLIT® is fast eating into the share of the duplex slitters, as more and more customers become aware of the advantages of dual turret technology. Set to Premiere in Plastindia 2018, the ROBOSLIT® Plus dual turret slitter rewriter will reveal an entire new dimension in the domains of productivity, safety, quality, simplicity of set-ups, versatility, material handling and process supervision. To put in one word- superlative. ■
