SP Ultraflex is also working on additional solutions such as automatic taping and **automatic clipping systems**. These developments are expected to further enhance efficiency and reduce manual intervention in slitting operations.

The company expects to introduce these advanced features within the next six months.

Positive Response at HIPLEX

SP Ultraflex received an encouraging response from visitors at HIPLEX, with strong interest from converters and industry professionals.

"Although it is only the second day of

the exhibition, we have already received visits from quality customers and have had meaningful discussions. Visitors are appreciating the automation features and productivity benefits of our technology," Pankar shared.

The company also appreciated the exhibition platform for helping it connect with customers from different regions of India, particularly the southern markets.

"While we have traditionally had a strong presence in northern India through major industry exhibitions, HIPLEX has given us an excellent opportunity to connect with

customers from southern regions. We are receiving visitors from cities such as Bengaluru and Chennai, and the response has been very positive," Rohan Pankar concluded.

With its focus on automation, productivity enhancement, and operator-friendly solutions, SP Ultraflex continues to strengthen its position as a technology-driven solution provider for the flexible packaging and converting industry.
